

SPECTRALINK WIRELESS TELEPHONE ACCESSORIES

BENEFITS

- Simplify operation without extensive training
- Reduce configuration and administration time
- Enable 24-hour operation
- Protect your wireless communication investment
- Proven durability for use in all business environments

INCREASE THE VALUE OF YOUR INVESTMENT

SpectraLink, the leader in workplace Wi-Fi telephony, offers the industry's most comprehensive portfolio of wireless telephony devices for the workplace. SpectraLink offers a wide range of accessories to support the needs of wireless users. From configuration and charging devices to headsets and carrying cases, SpectraLink's complete line of accessories are specifically designed to meet the durability and usability requirements of customers on the move.

CHARGING OPTIONS

Whether you are an eight-to-five, day-shift worker or operate in a 24-hour environment, SpectraLink has charging options to meet your needs. With Single or Dual Chargers for individual employees or Quad Chargers for multi-shift environments, SpectraLink keeps your handsets charged throughout the day. All SpectraLink charging options provide a full battery charge in approximately one and a half (1 1/2) hours.

HEADSET OPTIONS

SpectraLink offers two headset models to provide comfortable hands-free operation. The over-the-ear model provides a secure three-point contact to ensure stability and eliminate ear discomfort. The over-the-head model is a comfortable, unobtrusive headset that includes a padded earpiece and quick-disconnect assembly for simple operation.

CARRYING OPTIONS

A wide variety of carrying options are available to protect your wireless communication investment. SpectraLink offers both spring-loaded and swivel-style clothing clips to meet the personal carrying preferences of individual users. For those interested in maximum protection, SpectraLink

offers carrying cases for all models of Wireless Telephones. These rugged carrying cases come in black or yellow and can be ordered with or without keypad covers to protect the face of the handset from the rigors of day-to-day use.

NETLINK DOCKING STATIONS

The NetLink s340 and s640 Docking Stations complement SpectraLink's handset portfolio by providing a desktop telephone set that charges the NetLink e340 or NetLink i640 Wireless Telephones while functioning as a fully-featured digital PBX extension. These Docking Stations increase productivity and satisfaction for the worker that splits time between a desk or workstation and frequently roams the workplace environment. Equipped with a speakerphone, charging cradle and optional push-to-talk capability, these desksets are ideal for managers and staff personnel who need the convenience of a desk phone and the flexibility of a wireless handset. And because the NetLink Docking Stations communicate via the wireless infrastructure, they also reduce closet-to-desk wiring costs and uniquely provide telephony access in difficult to wire environments.

CONFIGURATION CRADLE (NETLINK ONLY)

The NetLink Configuration Cradle is an administration tool that reduces initial configuration time, provides rapid disaster recovery, and simplifies on-going rotation of security keys. The cradle itself is connected to a PC and uses a Windows-based application to change and store all configurations and settings on the NetLink e340/h340/i640 Wireless Telephones. System administrators can store multiple configurations to support different user profiles within the customer site.
